

990001 – 990018 Color Charts

The Kremer Pigments color charts now have a new, attractive design. All color charts are supplied in a document folder. The colors are printed on acid-free paper 180 g, the individual sheets in A4 format can be placed side by side and compared.

The color samples now are 3 x 5 cm, more than twice as large as before. The colors are not painted on with a brush. The paint application is by screen printing, but of course with the original pigments. Except for a few special cases, the pigments are in a water-based binder, made of Gum Arabic (# 63300). Thus the color of the pigment is hardly changed. Exceptions are pigments that can not be processed in this binder, such as Dragon's Blood and Copper Resinate.

Opacity

All colors are applied in one layer. A part of the paper is previously printed with a gray scale, which should clarify the opacity of the pigments. The gray strips have ink coverage of 25%, 50% and 75%. With more opaque pigments the grayscale is less visible.
